

BELL INTERNET DEDICATED T1

BUSINESS INTERNET DEDICATED T1

The dedicated access service provides Internet access, but can be combined with other Bell Internet solutions. This service includes domain name and IP address registration. Clients are connected 24 hours a day through Bell's dedicated Internet Access. Connection options are adapted to customer's requirements, taking into account their existing systems and networks.

This fast and dedicated connection can satisfy all demands, even in peak periods. A dedicated access will be packaged with the CSU/DSU and Router as well as services such as DNS, Domain registration, address allocation, and news feeds option. Through a dedicated access connection an enterprise can provide its employee's access to the Internet via existing LAN infrastructures while at the same time exercising some control and audit capability over how this access is used. For these reasons businesses are generally consolidating early individual dial Internet accesses onto a corporate access via LAN service. Dedicated access is prerequisite to many higher level services such as managed firewalls, Extranets and Virtual Private Networks.

Features:

- Service-level agreements covering network accessibility, latency and packet-loss rates, and featuring an average MTTR (mean time to repair) of only 4 hours
- Static IP Address assignment
- Customer Premise Router
- Router Configuration
- Router Installation
- 7 X 24 Router Monitoring
- Router Maintenance
- 7 X 24 Network Surveillance
- 7 X 24 access to the Network Management Centre
- Domain Name Registration (First Domain Name Only)
- Primary & secondary DNS (First Domain Name Only)
- Newsread / Newsfeed Service

Benefits

Improve ROI

- Reduce costs and improve productivity
- Reduce costs and improve productivity
- Reduce capital expenditures on network management systems
- Reduce expenditures associated with network operations
- Concentrate valuable resources on core business objectives

Reduce downtime:

- Improve network performance, reliability and consistency
- Minimize the impact of upgrades and network design changes

Professional network management:

- Extensive monitoring – 24/7 availability and router-threshold monitoring
- Comprehensive reporting – site- and network-level reporting available through a convenient web portal
- Expert troubleshooting – 24/7 single point of contact for end to end network troubleshooting and restoration.
- Professional expertise – leverage our team of network engineers to create, manage and optimize network designs

Overall

- Installation charges among the lowest on the market
- Installation intervals among the shortest on the market
- Best quality of service on the market with round-the-clock monitoring
- All-inclusive global solutions: from local access and long distance, to e-commerce solutions and telephone systems
- Evolving with a client: the many Business Internet services we offer allow us to offer the right product according to a client's bandwidth needs.

Why Business Internet T1?

- Dedicated T1 access significantly reduces operating costs, by using a single telephone line for various uses (telephone, fax, Internet), reducing inventory and trimming mailing costs by shifting to email.
- Allows integration of an organization's transactional systems
- Bandwidth is available according to client needs
