

# Dedicated high-speed access with the uptime your business demands

## Bell Business Internet Dedicated service

Your network is how your business stays connected. Running on Canada's most advanced fibre optic network, Bell Business Internet Dedicated service is engineered to deliver the speed, scalability, performance and reliability your business needs today and tomorrow. Ideal for organizations looking to host a website, manage an email server or connect workstations, Business Internet Dedicated service is supported by industry-leading uptime guarantees and Canada's largest support team.

Bell Business Internet Dedicated service gives you permanently connected, high-speed Internet access with exceptional uptime and performance. It offers comprehensive service-level agreements, stringent security protection, and 24/7 monitoring to ensure optimum performance and reliability. It is the ideal solution if you are looking to host a website, manage an email server or connect workstations over a LAN.

---

### Why choose Bell Business Internet Dedicated service

**With Canada's largest and most advanced fibre optic network, you can send and receive data faster in more places.**

Providing consistent upload and download speeds up to 1 Gbps plus with 94 points of presence across the country – the most in Canada – Bell delivers maximum performance for your business.

**Our network uptime guarantee ensures exceptional availability for your Internet service.**

We provide 99.999 percent network availability backed by stringent service-level agreements (SLAs), ensuring you have built-in redundancy that minimizes downtime and ensures your business stays up and running.

**Flexible, tailored Internet solutions from Bell, you pay only for what you need.**

Choose the Internet service that best suits your requirements, whether for the smallest satellite office or the largest corporate headquarters. With our burstable Internet option, you can quickly and easily scale to meet dynamic bandwidth requirements.

**Business Internet Dedicated service is an IPv6-ready solution that also provides expert support to help you plan your migration from IPv4 and maintain business continuity.**

Our team of professionals can support your existing IPv4 applications while deploying IPv6 over the same Internet connection.

**With our easy-to-use portal, you can monitor and gain insights into your Internet bandwidth consumption to ensure optimal performance.**

Reporting metrics including usage and uptime allow you to make decisions about your bandwidth capacity as your business evolves.
