

Enjoy more choice with flexible Internet services for your business.

Business Internet service from Bell

In today's rapidly evolving business Internet environment, every operation has unique demands that can change significantly over time. In order to succeed today, businesses need Internet services that are fast, reliable, flexible and backed by strong technical support.

Solution

Business Internet service from Bell offers cost-effective, high-speed, business-grade Internet access across several flexible, feature-rich packages. You can customize the service to your business needs by choosing from a variety of service levels, speeds and feature options.

Features

Delivered over Canada's most advanced fibre optic network technology, Business Internet service from Bell includes:

- A range of download and upload speeds up to 250 Mbps
- A modem with Wi-Fi capabilities
- Dial backup
- Standard 24-hour service-level objective (SLO), with same day, next day repair
- Full installation by a technician

Options include:

- A static IP address
- Unlimited email accounts
- Domain name registration
- An eight-hour mean time to repair (MTTR) service-level agreement (SLA)
- Onsite technician support

Benefits

- **Because Bell is Canada's #1 Internet service provider, you can send and receive data faster across many places** – At speeds up to 250 Mbps, Bell delivers maximum performance for your business.
- **Pay only for what you need** – You can choose from a variety of flexible options to ensure the service suits your organization's needs, including: upload and download speeds, email storage capacity, and security level options including online threat protection, data backup and a full package that also includes PC security.
- **Never worry about additional costs** – You get unlimited usage, giving your employees the ability to do everything they need to online, with full access to their business applications.
- **With the largest support team in Canada, you get better support for your business** – We offer 24/7 technical support and an eight-hour mean time to repair (MTTR). Plus, your services and router are supported by experienced and dependable provisioning, installation, configuration and maintenance.

Why Bell?

Businesses that demand always-on Internet service come to Bell, Canada's #1 Internet service provider. Supporting 80% of all network traffic in Canada, Bell operates the largest voice, data and wireless network – each year investing more than \$3 billion to make Canada's best network even better. With the largest all-optical and wireless network in the country, we reach 99% of people and businesses, offering unparalleled speed, performance and reliability.

Bell has Canada's largest team of certified professionals to work with your organization to design, build and implement your Internet solution.
